Lab Report

A short, descriptive title for your paper

Jane Smith[*,a,1] and Alex Chen[b,2]

[a] *Department of Physics, Fictional State University*
[b] *Institute for Applied Research, Fictional State University*

Manuscript compiled November 9, 2026

Abstract

Replace this abstract with a concise, self-contained summary of the paper: the problem addressed, the method used, and the main result. Two to four sentences is typical for a research article.

Keywords: *keyword one, keyword two, keyword three*

1. INTRODUCTION

Start the introduction here. Motivate the problem, situate it against prior work with a citation [**example2024**], and state the contribution of this paper in the last paragraph of the section.

2. BACKGROUND

Use this section for the material a reader needs before the main contribution: definitions, notation, or a summary of related methods.

Note

The `note` environment is useful for calling out an assumption, caveat, or aside without breaking the flow of the main text.

3. METHODS

Describe the approach taken. A typical equation is written as

$$E = mc^2 \tag{1}$$

and referenced in text with eq. (1). The `stix2` font this class loads covers the symbols needed for most equations without also loading `amsmath`/`amssymb`.

Information

Code listings can be added with the `listings` package, already loaded by this class:

```
def greet(name):
    return f"Hello, {name}!"
```

Code 1. A minimal example.

4. RESULTS

Present the findings here. Figure 1 shows a placeholder figure — replace `figures/example.pdf` with your own artwork.

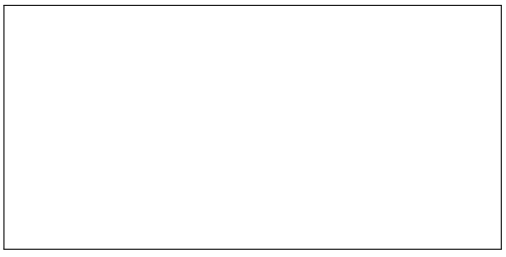

Figure 1. Replace this placeholder with your own figure.

5. DISCUSSION

Interpret the results, note limitations, and compare against the background material introduced above.

6. CONCLUSION

Summarise the contribution and, if relevant, point to future work.
