Title of the Laboratory Report

Your name
Student number (optional)
Course name and code
Department / University

Keywords: experiment; measurement; uncertainty

1. Introduction

Explain the scientific question and why it matters. State the objective of the experiment and give enough context for the reader to understand the report. Cite sources where appropriate, for example [1].

2. Theory

Present the principles and equations needed to interpret the measurements. Define every symbol and include assumptions. For example, a linear model can be written as

$$y = ax + b, \tag{1}$$

where a is the slope and b is the intercept.

3. Method and Equipment

Describe the apparatus and procedure with enough detail that another person could repeat the experiment. Include a labelled figure if it helps. Put image files in the same folder as this `.tex` file and replace the filename below when you add one.

4. Results

Report observations and calculated results clearly. Keep interpretation for the discussion. Include units and uncertainty, and refer to each table or figure in the text. Table 1 shows a simple example.

Table 1: Example measurements. Replace these values with your data.

Trial	x (unit)	y (unit)
1	1.0	2.1
2	2.0	4.0
3	3.0	6.2

5. Discussion

Interpret the results in relation to the theory and objective. Compare with expected or reference values when relevant. Discuss uncertainty, likely error sources, limitations, and possible improvements. Explain unexpected results rather than simply listing them.

6. Conclusion

Summarise the main finding and whether the objective was achieved. Include the most important numerical result with its uncertainty when applicable. Do not introduce new results here.

Acknowledgements

Optional. Acknowledge help or resources that contributed to the work.

References

[1] Author, “Title of source,” Publisher or journal, year. Replace this example with the sources you actually used.

Appendix A. Supporting calculations

Optional. Put extended derivations, additional data, or other supporting material here. Remove this appendix if it is not needed.
